

## PARTICIPANT RECRUITMENT FLYER

### **Visual Fixation and Function in Central Vision Loss**

- People with visual impairment due to conditions like macular degeneration lose their central vision, which makes it difficult for them to read, drive a vehicle or recognize faces.
- **Aim:** To understand the eye movement pattern and residual visual function in people with central vision loss.
- **Why Participate?** To help vision scientists better understand the central visual impairment, that is pivotal for devising rehabilitation strategies in the future.
- **Who can Participate?** If you have some form of ‘Macular degeneration’ in both eyes and a distance vision that is better than 20/400 in your better seeing eye.
- **What to Expect and How Long?** Recording of eye movements, imaging and assessing the functioning of your eyes. A single study visit, approximately 2 hrs. long, including rest breaks.
- **Compensation:** \$25 OR \$50 VISA gift card towards your time.
